Nancy,
Attached are the updates on the West Virginia spill that I used at staff meeting yesterday. I will ask Maria to send you the other write ups on the Legionella conference call and the status of the HF Guidance electronically. I just have a hard copy. We'll get that to you ASAP.

Update on WV Spill

(1) Overall: Nine counties and over 300,000 residents remain impacted by the "Do Not Use Water Restriction". The state will lift the ban when the levels of 4-Methylcyclohexane Methanol are consistently below 1.0 ppm.

(2) Water Quality: The latest sample results indicate that the treated water has been consistently less than 1 ppm MCHM over 24 hours, so the water company may now be ready to move to distribution system (DS) sampling. Recent intake (raw river water) samples were very low or non-detect.

(3) Flushing: Authorities have announced a phased plan to lift restrictions by zones, in an order that restores four major hospitals back to full operations. Downtown Charleston will be the first zone (25,000 customers), followed by Kanawha City and South Charleston.

There is no specific flushing plan for the system yet. The plan will depend on sampling results.

One key will be flushing in individual homes/buildings. Procedures for residents to follow are being developed. There is no specific timeline for lifting restrictions. The timeline will be dictated by the sampling results.

(4) Laboratories: The West Virginia Department of Health and Human Resources (WVDHHR) is receiving lab support from DuPont, WVDHHR and possibly WVDEP; WVAV (Huntington); two National Guard Civil Support Teams (Canton, OH and Washington, DC), and two contractor labs. The labs will enable the State to process a large number of samples involved in the distribution system testing.

(5) OGWDW: Steve Allgeier has assisted Region 3 with treatment efficacy/options analysis. Elizabeth Hedrick has assisted Region 3 with sampling and lab analysis. Kevin Tingley has coordinated response actions with Region 3, USACE, FEMA, and WARNs.
